Who are we looking for to participate?
cycle BOOM aims to include 240 people over 50, with different levels of cycling experience, living in the Oxford, Reading, Bristol and Cardiff areas. We are carrying out fieldwork from June to September in 2014 and during the same period in 2015. We require a diverse range of participants to take part. The information you provide in the Application to Participate form will help us to select a varied group of both men and women from different backgrounds from across the four areas.

Who are we looking for to participate?
- People who have stopped cycling and don’t intend to cycle again
- People who have stopped cycling or are doing a more limited amount, and are thinking of restarting (or doing more)
- People who cycle fairly regularly and are not thinking of stopping

What is the purpose of the study?
cycle BOOM is a study to understand cycling among the older population in the UK and how this affects independence, health and wellbeing. The aim is to advise policy makers and practitioners how our environment and technologies can be designed to help people to continue to cycle in older age or to reconnect with cycling. This will be done through a ‘toolkit’ of advice and guidance supported by a short documentary film.

Who is overseeing the study?
cycle BOOM is being led by Dr Tim Jones, a Senior Research Fellow in the Department of Planning at Oxford Brookes University, in association with the University of Reading, the University of the West of England (Bristol) and Cardiff University. Each University will carry out research in their local area, co-ordinated by Oxford Brookes.
What will happen to me if I take part?

The cycle BOOM study involves two different elements:

**ELEMENT A – Cycling life history interview**
All the selected participants will take part in an initial cycling life history interview.

**ELEMENT B – Cycle ride observation and interview**.
Those who already cycle will take part in a cycle ride observation and interview.

Those who no longer cycle and don’t intend to cycle again will not need to do anything further.

---

**ELEMENT A**

**Cycling life history interview**

**Purpose**: to understand the roles that cycling has (or has not) played in your life.

This will involve completing a simple ‘Life History Grid’ to establish where you have lived; family circumstances; places of education and work; methods of transport; hobbies/leisure activities; and when you have cycled in your life. The task is straightforward and will take approximately one hour. We then contact you to organise a follow-up interview. You can decide whether this takes place at your home, at the local university or another convenient location. At this interview we will use the Life History Grid to explore the role that cycling has (or has not) played in your life. We will also look at some maps and street view images of the places you have lived to understand the types of environment for cycling. We will ask your permission to audio record the interview to help with our analysis.
ELEMENT B
Cycle ride observation and interview

Purpose: to investigate and document your experience of cycling in different environments.

If you already cycle we will arrange a convenient time to observe you taking part in a cycle journey or activity. This will involve a researcher following you as you cycle.

We will ask you to wear head gear fitted with sensors to safely measure brain wave signals. You will also be asked to wear glasses to record where you are looking. These can fit over the top of spectacles if you wear them. The devices are safe, fit comfortably and are hygienic. Sensors that record proximity to traffic, sound levels, and your speed and location during the ride will also be placed on your cycle. The researcher following you will be fitted with a video camera to record your ride, and a video camera will also be attached to your pedal cycle.

The researcher’s role is not to interfere with the ride but to document your experience as if you were going about your normal business.

After the ride the video footage will be played back and the researcher will discuss it with you. This can take place at your home, at the university or another convenient location. The discussion will include the decisions you made at different points along the route and your feelings about different parts of the ride. This interview will last approximately one hour and we will ask your permission to video record it.

If I am selected what are the advantages of taking part?

If you are selected it is completely up to you to decide whether or not to take part in the study. If you do take part you will be free to withdraw at any time without giving a reason.

The Life History Interview and Cycling Observation and Interview are designed to be engaging and enjoyable.

By taking part you are increasing understanding of cycling and helping to inform decisions about how we can better design places and cycle technology for an ageing population.

You will have the chance to connect with other people taking part in the study.

Participants who complete the Life History interview will be offered a £10 gift voucher. An additional £10 voucher will be offered to those completing the cycle ride observation and interview.
Will what I say in this study be kept confidential?
All information collected about you will be kept strictly confidential (subject to legal limitations). To protect your privacy your name will be removed from your data when it is analysed and a code will be added. We will use a pseudonym in presentations and publications unless you specifically state that you would like us to use your real name. Any videos or still images will not be used without your permission.

What will happen to the results of the research study?
Everyone who takes part in cycle BOOM will be given the option to receive a short report of the main findings. We will publish our findings in academic and non-academic journals; develop a toolkit for policy makers and practitioners (e.g. politicians and planners) based on our findings; and create a short documentary film to make them more accessible. We will also take part in conferences and other events to tell people about our results.

How is the study funded?
The cycle BOOM study is funded for three years by the UK Research Councils’ Lifelong Health and Wellbeing (LLHW) programme (commencing in October 2013). For further details of LLHW visit www.mrc.ac.uk/Ourresearch/ResearchInitiatives/LLHW/about/index.htm

Concerns about the study
The study has been reviewed by Oxford Brookes University’s Research Ethics Committee (Registration No: 140813) and complies with the ethical requirements of University of Reading, Cardiff University and the University of the West of England.

If you have any concerns about the way in which the study has been conducted, please contact Dr Tim Jones, Principal Investigator - tjones@brookes.ac.uk or the Chair of the Oxford Brookes University Research Ethics Committee - ethics@brookes.ac.uk.

Thank you for taking time to read this information sheet.
